

PROMISEC
Securing The Internal Network

POWER MANAGEMENT SOLUTIONS

Good for the Environment, Great for Your Bottom Line.

One of the most overlooked enterprise costs today is power consumption. Every enterprise uses PCs, monitors, printers and other peripherals, which are normally left on even when they are not in use - at night, weekends, holidays and even breaks during the work day. Energy Star estimates that a company can save up to \$75 per PC annually if they employ an effective power management solution. The challenge for most organizations is to reduce power consumption without impacting performance.

Promisec® offers simple, yet effective, power management solutions that directly address this challenge in a manner that eliminates the need for any software to be deployed on employee workstations. With Promisec, you can – within hours:

- ▶ Define your specific power management policies
- ▶ Audit, deliver and enforce your policies on all endpoints in the organization in the very first sweep of your internal network

Reduce Endpoint Power Consumption by up to 50%

Promisec's power management solutions are virtually painless to install and offer many additional benefits, including:

- ▶ **100% Compliance:** You no longer have to rely on the diligence of your employees to turn off their PCs and monitors
- ▶ **Ease-of-Use:** You have complete remote control of your internal network and its various endpoints from Promisec's central management interface
- ▶ **Enhanced Security:** If changes are made to the power settings, Promisec can change them back in line with your original corporate approved policies
- ▶ **Immediate Savings:** Begin to realize immediate environmental and cost savings within hours of deployment

Gain Flexibility, Control and Real-World Cost Savings

Promisec is the only clientless Power Management solution on the market today. Other solutions require an agent to be installed on every endpoint on the network, often requiring months to deploy and can have a dramatic effect on endpoint network performance and reliability. Running from a single host, Promisec's solution can be deployed and in effect within minutes with negligible impact on the network. Further differentiating our solution, our architecture also enables a robust endpoint security suite capable of:

- ▶ **Preventing Blacklisted Applications** – such as P2P, Instant Messaging, Synchronization, Remote Control, etc., from residing on your internal network
- ▶ **Monitoring for Unauthorized Hardware** – such as modems, multiple network cards, etc.
- ▶ **Reducing Data Leakage** – by enforcing removable media policy for USB, Floppy and CD/DVD
- ▶ **Providing Automatic Remediation** – by fixing most deviations from user-defined expectations designed to enforce your organization's compliance standards
- ▶ **Ensuring that User-Defined Agents are Enabled and Up-to-Date** – such as anti-virus software, program updates and more

Promisec diagnostics can measure your current endpoint power consumption levels to help demonstrate your potential cost savings.

With Promisec's Clientless Power Management Solutions, You Can Easily and Remotely:

- ▶ Turn off monitors
- ▶ Turn off hard disks
- ▶ Place systems into standby or hibernation modes
- ▶ Enable Power-up on LAN using pre-scheduled configurations to meet your offline patch-management needs
- ▶ Diagnose power consumption and costs (pre- and post-deployment)
- ▶ Enforce your specifically designed settings

The result: greater internal network security and efficiency with less impact on the environment and significant savings in terms of endpoint energy consumption.

Reduce power consumption and realize significant cost savings without impacting performance.

About Promisec

Promisec, Inc. provides clientless internal network security software. Promisec gives IT administrators visibility and control over corporate users and their computers, providing a real-time, clear picture of internal threats and the tools to neutralize them. The company's products, Promisec Spectator® and Promisec INNERspace™, detect and eliminate internal threats to enterprise networks and are in use by a full range of companies from SMBs to Global 2000 organizations. By delivering both monitoring and remediation, Promisec protects against business disruption from internal network threats and enables organizations to confidently place trust in their most important assets - their people. Founded in 2004, Promisec's headquarters are located in Israel with offices in New York and Paris.
